

Maximize the Q2 Platform with development and customization tools

Q2 Caliper SDK

Financial institutions (FIs) need to differentiate their digital offerings to attract and retain account holders, but even highly customizable and flexible online and mobile banking solutions can't be everything to everyone. Q2 understands the importance of extending and customizing our platform to meet the ever-changing needs of our FI customers. This is why we work hard to build innovative banking tools and fintech solutions for FIs. This is also why we're making our comprehensive software development kit—Q2 Caliper SDK—available to our customers.

Many SDKs fall short of offering real value to FIs, offering very little in the way of customization or extension; some are little more than dense manuals that are rarely, if ever, used. Q2 Caliper SDK is different—giving you the same tools that we use in house, as well as access the Q2 Dev Environment on a full stack of the Q2 Platform, training, certification, tech support, and more.

Q2 Caliper SDK gives you the same tools that we use in house, as well as access to the Q2 Dev Environment on a full stack of the Q2 Platform, training, certification, tech support, and more.

Comprehensive and tested

Our SDK wasn't made for our clients—it was made for our developers. These are the same tools that we've used internally for more than seven years. Over time, we've improved, expanded, and polished our SDK into the comprehensive toolkit it is today—one that we're proud to share with our FI partners.

A developer's community

Q2 Caliper SDK is more than documentation or samples. With unprecedented access, training, tools, and support, our SDK is intended to be a robust developers' community. Developers can leverage pre-built customizations or collaborate to create new workflows.

Get the most from the Q2 Platform

Unlike some SDKs that offer limited access with watered-down tools, limited capability, and little support, Q2 Caliper SDK is a proverbial key to the kingdom—granting access to the same environments and tools we use at Q2, allowing FIs to develop and customize their digital banking solutions quickly and easily.

Benefits and features

To ensure that FIs have all the tools they need to get the most of the Q2 Platform, our SDK contains a variety of different components and kinds of access:

Q2 Caliper SDK Access

You can develop and integrate workflows inside of the Q2 Platform. Customers may choose to develop their own custom workflows or choose from existing SDK workflows.

Q2 Dev Environment

The Q2 Dev Environment is a full stack of the Q2 Platform. You will have full control of your test environment and access to the database and system configuration while coding.

API Access

Q2's SDK program offers access to Q2 APIs, allowing you to interact with the Q2 Platform using programs written and deployed outside of the Q2 datacenter.

Training and Certification

Gain expertise in using Q2 Caliper SDK and our APIs in a hands-on training lab, led by Q2 Development staff.

Code Review and Deployment

This includes security reviews, functionality reviews, and reviews for proper coding techniques as outlined in our documentation. The deployment process includes packaging and deploying code, as well as testing the code once deployed.

Development Support

Enjoy access to Q2 Developers knowledgeable of the Q2 Platform and experienced in writing against our APIs and using our SDK.
